

AI FOR UI UX:

Designing the Future, Today!

Why you should learn AI?

AI is having a disruptive impact on all careers and especially Design Careers such as UI/UX Design. While we fear job displacement, it is important to note AI itself won't take jobs, skilled professionals who know how to use AI will shape the job markets of the future. Leading UI/UX designers are using AI skills to improve their process productivity and quality of design and experience.

Unlock the Power of AI in UI UX Design

Edit's **AI for UI/UX Design course** is crafted to equip you with cutting-edge tools and techniques that integrate artificial intelligence into the creative design process. With AI, you'll learn to optimise user experiences, improve workflows, and create intuitive interfaces that drive user engagement and satisfaction.

What you will learn ?

1 Introduction to AI

- AI and Generative AI Technology basics and Modern use cases

2 Prompt Engineering

- Structured approach to getting the most out of AI engines

3 Empathise with AI

- User research
- Competitor research
- Problem Statement

4 Define with AI

- Persona Development
- Empathy Mapping
- User Journey
- Affinity Mapping

5 Ideate with AI

- Information Architecture
- Sitemap Creation
- User Flow
- Wireframing

6 Prototype with AI

- Prompt Prototyping
- Design Systems
- Interaction Design with AI

7 Automated Testing

- AI tools for fast, efficient usability and performance testing.

8 Portfolio Development

- UI/UX portfolio powered by AI tools
